

meet the unsultants

CPR for your ERP and supply chain with symfini™ CPE

STOP trying to hit a moving target

It is impossible to do supply chain planning or even run an ERP system if your organization cannot perform all processes in the supply chain with CPE:

*The same time,
cost and process
every day*

consistent

*Set up in your systems
so that planning can
predict and coordinate*

predictable

*The most efficient,
attainable production
and operation standards*

efficient

Announcing symfini™ CPE services

The fundamental prerequisite to doing any type of effective supply chain planning is that the performance of all of your business operations and particularly all nodes of your supply chain must be Consistent, Predictable, and Efficient (CPE). If you cannot accurately predict how every step in your process will perform and if that process is not optimal in its efficiency, any attempt to plan is like aiming at a moving target.

- You must be able to repeat this efficient behavior with minimal variance
- This provides the opportunity to coordinate and optimize your supply chain
- It is driven by the behaviors, motivations, measurement of supervisors, and front line managers
- It must be coordinated with the goals and strategies of senior management
- The Powers Company can teach your organization how to achieve efficient behaviors consistently

The Powers Company approach

- Analyze your operations from the ground up
- Evaluate how each step in your supply chain works together
- Assess the level of organizational coordination and presence of silos
- Identify true potential for optimal efficiency
- Identify the culture, attitudes, and behaviors necessary to institutionalize and sustain a CPE environment
- Estimate the expected financial returns
- Develop a project plan to implement CPE
- Implement the Integrated Management Operating System
- Guarantee the financial results and returns
